

test.con Monitoring and Checking

test.con Monitoring and Checking = TC.MaC

- the Q.start (q.station start application) shows the state off the several q.station kernels
- if the realtimekernel projekt is downloaded and the TC.MaC shows a none working realtimekernel projekt after the download
 - the task properties of the realtimekernel program is „cyclic processing“
 - change to „Int. Physical“
 - download again
 - TC.MaC shows now a working realtimekernel projekt
